Excerpt: .in the field cannot be and are not thus taken account of by the users and makers of tile. The purpose of the test should be to ascertain the strength quality of the tile, as compared with other tile, or with standards known to be safe strengths under ordinary circumstances. The test should be applicable to his product by the tile manufacturer, who may or may not know where his tile are to be used. The actual value of trying to imitate service conditions, therefore, or of using the fact that such an attempt is made as a recommendation for a particular method of testing may be open to question. After safe limits of strength, as determined by the test, have been established, it should not be a matter of much concern whether the type of equipment employed applies pressure in one way or...

Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.
